# Management of stock and traceability of products

To have a sufficient products in stock but not too much since products in stock cost money, they can expire, they can become unusable for a multitude of reasons…This is a point of particular interest in which a great deal of energy can be lost and still mistakes will happen.

Moreover quality standards demand a thoroughly elaborated producttraceability: who did what with which batch? And yet: management of stock and producttraceability don't need to be nightmares. Agaat will steer everything in the right direction.

Some of the many advantages of Agaat

- Reception, taking into use and putting out of use can be done manually or by bar code

- Automatic production of ordering proposals

- Control on expired products

- Tracking of outstanding orders

- Simple control of bills

- Alternative suppliers are on hand if the regular supplier is in the impossibility to deliver

- Complete traceability of products, batchnumbers, users, dates…

```
Productcard
    |
Subscription --- Ordering proposal
                 Order
    |
Reception --- Accounting
    |
Release
    |
Taking into use
    |
Putting out of use --- Tracking use/costs
```

- Useful information for the management:
  > Tracking of the consumption by department
  > Purchase volume by supplier
  > …

- Automatic management of certificates, warning e.g. if a preliminary batch-comparison is necessary

- Segmentation / division of products in subproducts is possible

- Products can be used in different departments with traceability per department

- Storage conditions per product and by location

- User access is linked to functions

- Language can be adjusted per user

- Safety pictograms / danger codes with links to safety protocols

- Built from the practice in an ISO 17025 surrounding

- Easy to use, complete in information
